Introducing UltraKey 5.0 for Widescreen Palm Powered™ Devices (Dana)

UltraKey 5.0 for Dana® by AlphaSmart, continues the Bytes of Learning tradition by providing the highest quality keyboarding instruction with the most teacher-friendly management tools.

UltraKey 5.0 ships as two applications: an instructional application called UltraKey and a management application called UltraKey Manager. Teachers can employ UltraKey Manager on a teacher's Dana to review student progress, adjust program options, and oversee individual settings.

UltraKey 5.0 for Dana has the following important features for schools:

- Graphically animated instruction demonstrates correct posture and striking technique.
- Interactive lessons systematically introduce the alphanumeric keyboard and naturally progress to chains, letter pairs, words and sentences.
- Real-world skill checks develop technique and accurately measure performance.
- Detailed progress reports are displayed on screen or printed.
- Records can be beamed to the teacher's Dana for review.
- Users can set individual challenge levels or the teacher can set them.
- Teachers control a host of options and assess student progress using UltraKey Manager -- included with all multi-station licenses.

UltraKey 5.0 is available to schools in various multi-station editions and district licenses.
